

PRESS RELEASE

Kverneland Taarup 5090 MT Goes ISOBUS with its New Control System Designed Around the Tractor Driver

10.11.2013, Kerteminde, Denmark

The Kverneland Taarup 5090 MT

A design with focus on long and intensive workdays: introducing the 5090 MT, now available with ISOBUS control. In addition a new intuitive joystick control provides supreme management and comfort.

The Kverneland Taarup 5090 MT is packed with features, and with its newest feature the 5090 MT can be controlled directly by ISOBUS compatible tractors. There is no need for a separate terminal when operating with the 5090 MT's 9 m working width, steel tine conditioner and the versatile BX Swath.

This ensures a truly professional solution designed around the tractor driver, adding maximum support and convenience on intensive workdays.

Control at Your Fingertips

All main functions of the 5090 MT can be transferred to the new Kverneland Group Joystick. This makes operation of the 5090 MT swift while securing accessibility and support. The joystick comes in a compact size, easy to place right next to the operator, making it ergonomically well positioned for long days of operation.

The joystick control is easily placed next to the operator, making comfort and control priority.

No Constant Switching Between Controls

Even more conveniently the control functions can be directly transferred to the joystick of the tractor. This means that the same lever can operate both mower and tractor.

Constant switching between different controls is completely eliminated, adding considerable comfort and easy monitoring for the tractor driver. A small screen integrated into the joystick will always keep the tractor driver informed about the chosen operation.

The Kverneland Taarup 5090 MT with BX Swath Belt and ISOBUS control will be introduced at the Agritechnica show in Hannover.

Kverneland Taarup 5090 MT ISOBUS – Specifications in Brief:
